PROFILE

Hardworking student, starting my career as web developer, I aim to create astonishing websites, having vast knowledge and some hands on experience in frontend technologies, and learning new things everyday. I am Looking for opportunities in the tech industry to enhance my learning experience and create best products.

WORK EXPERIENCE

Home Tuitions

- home tuitions mainly of computer science and Mathematics to the students of Classes 1 to 10

Projects

space invader game

- Developed the game using python libraries. The goal is to eliminate all of the aliens by shooting them. While the player has three lives, the game ends immediately if the invaders reach the bottom of the screen.

Queuing model

- A queuing model is a mathematical framework used to analyze and predict the behavior of waiting lines or queues. The aim of this project is to utilize mathematical and analytical techniques to better understand, predict, and manage the behavior of waiting lines or queues in various real-world scenarios.

Pharmacy Mangaement System

- PHARMACY MANAGEMENT SYSTEM successfully implemented offline medicines supply management database which helps us in administrating the data user for managing the tasks performed in medicines supply. The project successfully used various functionalities of Ampps and python flask and also create the fully functional database management system for offline pharmacy.
